

Listing of Claims:

1. (Previously Presented) An ESD electrostatic discharge device (ESD) safe wireless type of component comprising: a base, an electrically conductive copper trace provided on said base, and an insulating layer coated on said copper trace; wherein a dissipative coating layer is applied on the top of said insulation layer; wherein said dissipative coating layer is applied onto all connecting cables of ESD sensitive devices.
2. (Previously Presented) An ESD safe wireless type of component according to Claim 1, wherein the surface resistivity of said dissipative coating layer ranges about 10^4 - 10^{11} Ω /(unit square).
3. (Original) An ESD safe wireless type of component according to claim 1, wherein said dissipative coating layer ranges about 5 - 100 μ m in thickness.
4. (Original) An ESD safe wireless type of component according to claim 1, wherein said wireless type of component has its bonding pad area exposed.
5. (Canceled).
6. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the dissipative coating layer is applied via lamination.
7. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the dissipative coating layer is applied via sputtering.
8. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the dissipative coating layer includes a polymer.
9. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein said wireless type of component is configured to reduce a static charge from 1000 V to below 10 V.
10. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the ESD sensitive devices include a component of a disk drive.

11. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the ESD sensitive devices include magnetic data storage.

12. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the ESD sensitive devices include a slider.

13. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the ESD sensitive devices includes a pre-amp.

14. (Previously Presented) An ESD safe wireless type of component according to claim 1, wherein the ESD sensitive devices includes a micro-actuator.
